

HX8-11W

2.4m | 8ft ValuLine® High Performance, High XPD Antenna, dual-polarized, 10.000 – 11.700 GHz

Product Classification

Product Type Microwave antenna

General Specifications

Antenna Type HX - ValuLine® High Performance, High XPD Antenna, dual-polarized

Polarization Dual

Side Struts, Included 1

Side Struts, Optional 4

Dimensions

Diameter, nominal 2.4 m | 8 ft

Electrical Specifications

Operating Frequency Band 10.000 – 11.700 GHz

Gain, Low Band 45.4 dBi

Gain, Mid Band 46 dBi

Gain, Top Band 46.6 dBi

Boresite Cross Polarization Discrimination (XPD) 33 dB

Front-to-Back Ratio 72 dB

Beamwidth, Horizontal 0.8 °

Beamwidth, Vertical 0.8 °

Return Loss 26 dB

VSWR 1.1

Radiation Pattern Envelope Reference (RPE) 7391

Electrical Compliance ACMA FX03_10a | ACMA FX03_11a | ETSI 302 217 Class 3 | US FCC Part 105A | US FCC Part 107A

Cross Polarization Discrimination (XPD) Electrical Compliance ETSI EN 302217 XPD Category 2

HX8-11W

Mechanical Specifications

Compatible Mounting Pipe Diameter	115 mm 4.5 in
Fine Azimuth Adjustment Range	±5°
Fine Elevation Adjustment Range	±5°
Wind Speed, operational	201 km/h 124.896 mph
Wind Speed, survival	200 km/h 124.274 mph

HX8-11W

Operating Frequency Band

Bands correspond with CCIR recommendations or common

HX8-11W

allocations used throughout the world. Other ranges can be accommodated on special order.

For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.

The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

Denotes highest radiation relative to the main beam, at $180^\circ \pm 40^\circ$, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.

The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.

Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.

Radiation patterns define an antenna's ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of $\pm 1^\circ$ throughout

The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.

The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Maximum side force exerted on the mounting pipe as a
